Digital Resume

A great tool to find a job

Digital Resume

language: HTML / CSS

- The totality of your source files, except all useless files (binary, temp files, obj files,...), must be included in your delivery.

Design and create a page (or a set of pages) that you could host to have an online resume.

Your code should be clean and use the proper HTML and CSS properties with a clear separation between the twos.

Feel free to add animations and whatever can both improve your resume for the viewer (which could be a potential recruiter) and show your personality.

Your website **MUST** be responsive!

Organize cleverly your files and directories!

Here are some examples:

- a simple but elegant one
- a funny one, inspired by amazon
- an interactive and graphical one

The usage of frameworks and librairies is authorized. Your main goal for the next two days is for you to practice using HTML/CSS and have a good digital resume at the end.
